

Making Terms Matter: Presenting TermWeb, powerful terminology management software

Presenting TermWeb, the powerful terminology management software from Interverbum Tech. TermWeb is a web-based, platform-independent system designed to integrate with your company's content management system and processes. Use Tridion or SDL Trados Studio? No problem. Work in Microsoft Word or other desktop publishing software? TermWeb does too. However you manage terminology, TermWeb is a powerful and easy to use addition to your company.

All your terms are stored in a central database, so you can access your information from any computer, anywhere in the world. This also means that users are always seeing the most up-to-date list of terms. Users can easily add or edit terms, and TermWeb keeps a comprehensive history of all changes to your term database.

Once you have created a dictionary of terms, you can synchronize that list with SDL Trados Studio, Microsoft Word and other programs. When a user searches the correct translation or types an incorrect term in these programs, TermWeb notifies them of the correct term. And if you have other systems in place, TermWeb's open and well-documented API lets you integrate with those as well.

Manage and distribute company-specific terminology online

TermWeb can provide every member of your organization—regardless of location – with company- and industry-specific terminology via your Internet browser or company Intranet/Extranet. Everyone can easily access updated and comprehensive dictionaries/terminologies that are stored in one central database, thus ensuring the accuracy and consistency of your terminologies at all times.

TermWeb is platform-independent, which makes it easy and cost-efficient to implement. It features a robust but easy-to-use set of administrative options. You can define custom dictionaries, set viewing permissions for multiple groups and create an extensive system of filters to help users refine their search. And each term can contain a wealth of information: notes, support files (such as images, sound files or videos), visual relationship charts and more.

Are you ready for the challenge of multilingual communication?

- **Create a plan**

Our localization experts will work with your team to design the most efficient terminology integration plan for your company.

- **Get integrated**

We'll work with you to integrate TermWeb to your current environment and help import your existing information. We can also customize the user interface and database structure to suit your specific needs.

- **Create company-specific glossaries**

Does your company lack company-specific glossaries? We can extract and compile terminologies from your existing documentation to help you create them.

- **Training**

Our experienced terminology management experts provide user and administrator training for everyone that will be in contact with the terminology management system.

- **Support around the clock**

We have skilled staff ready to help you out with your queries at any time.

TermWeb – terminology management made easy

- Easy-to-use user administration functions
- Efficient collaborative editing using Grid View
- Comprehensive dictionary management
- Term history, including date, author and validator for each entry
- Create visual “relationships,” charts that show how terms relate to one another
- Definable access to filters and import/export functions
- Standard compatibility (TBX and ISO639)
- Printing functions (to PDF file or directly to printer)

Terminology on the go

With TermWeb’s hosting service, your software – including specific terminologies – is hosted on our servers; all you need is a web browser and an Internet connection. You get all the benefits of TermWeb with none of the cost or hassle of installation and maintenance. This is an option well suited for anyone who needs on-the-go access to their terminology database.

Take TermWeb into your own hands

TermWeb is also available for local installation on your servers. You can purchase any number of licenses and access the software and term database over your own secure Intranet/Extranet. If you use multiple translation agencies, you can also give them access to your terminology system, ensuring they always have the latest approved terms. TermWeb can even be integrated with other systems, such as your product data management, labeling, invoicing or bidding systems.

TBX compatibility

TermWeb fully supports TBX (TermBase eXchange), an open XML-based standard format for terminological data. TBX facilitates information interchange among term bases with different data models, e.g. the flow of terminological information throughout an information cycle, both inside an organization and with outside service providers. TBX files can be imported into and exported from most software packages that include a terminological database

Easy access to frequently used industry-specific terms

Does your company lack of a company-specific glossary? Interverbum technology can extract and compile specific terminology from your existing documentation. As a complement to your own glossary you can choose to subscribe to some of our published dictionaries of industry terms for a number of different sectors. You get access to the terms via our marketplace for terminology on the web: TermCentral.com
